

Talson Insulator
TAG FNA
 Technical Sheet

TECHNICAL DATA

H5	5th Wheel Height	950 mm
WB	Wheel Base	7.455 mm
IL	Inner Length	13.430 mm
L	Total Length	13.610 mm
IW	Inner Width	2.492 mm
W	Total Width	2.600 mm
H-F	Front Overall Height	4.010 mm
H-R	Rear Overall Height	4.040 mm
IH-F	Front Internal Height	2.950 mm
IH-R	Rear Internal Height	3.030 mm

TECHNICAL CAPACITIES

Tare Weight	8.950 kg
Total Permissible Weight	36.000 kg
Technical Possible Axle Load	24.000 kg
Technical Possible King-pin Load	12.000 kg

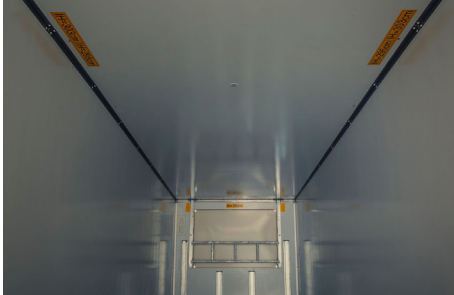

SPECIAL FEATURES

- Composite panel technology
- Special design for flower transportation
- Roller bed auto-down safety function
- Pharma certification
- EN 12642 - Code XL Certificate

Talson Cooler

TAG FNA

Detail Brochure

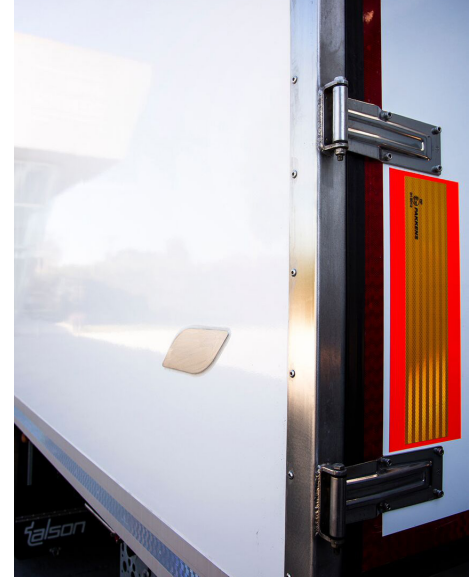

CONCORDE ROOF

Mega air cargo trailers are fitted with a slanted roof. This ensures that the trailers are not higher than 4.010 mm at the front.

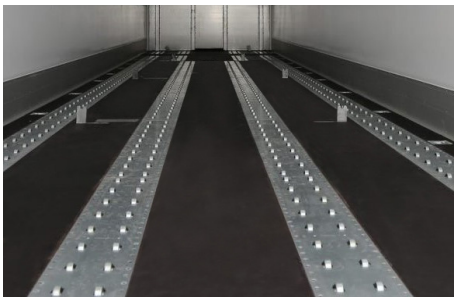

KICK PLATE

Galvanised steel kick plate on the side panels provides high impact resistance.

GRP SIDE PANELS

Talson's GRP side panels, with low thermal conductivity coefficient provides better insulation compared to steel. It is also lighter and easier to repair due to its modular structure.

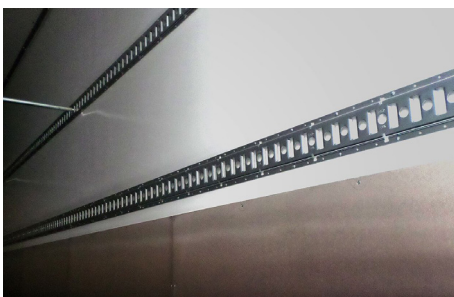

ROLLERBEDS

Rollerbeds are integrated into the vehicle floors in order to facilitate speedy loading and unloading of loads. With Auto Down Safety rollers lower down into the floor automatically while driving for maximum load security.

PALLET STOPPER

There are 10 flip-up pallet stoppers inside the trailer, 2 per air cargo pallet section and 2 to protect the front wall. This offers maximum load security whilst driving.

EXTENDED INTERNAL WIDTH

Talson offers extended internal width of 2.492 mm with the help of integrated lashing rails. This along with insulation enables ideal conditions for delicate flower transportation.

INTEGRATED LASHING RINGS

Talson trailers are equipped with 26 lashing rings, 13 on each side, discreetly integrated into the vehicle floor to anchor heavy weights for maximum load security.

INSULATED TALSON DOOR

Talson door is a container style door, designed to provide maximum strength at the rear and optimum load security. It improves durability and handling of the trailer. Also it can be easily equipped with electronic lock systems to enhance security.
